Applications for Development

Climate Services in Africa Project

is funded by
the European Union and

Introduction:

The GFCFS Intra ACP Climate Services and related Application (ClimSA) “support to is a project in the framework of the 11th European Development Fund EU contributing to the Global Framework for Climate Services (GFCFS). It’s overall objective is to foster sustainable development by combating climate change through strengthening climate service value chain.

In line with CLIMSA, ACMAD action focuses on climate services delivery to agriculture, Health and Disaster Risk Reduction sectors. ACMAD action builds capacity of national and regional centres to provide climate services meeting regional and country needs, support the African Union and Regional Economic Communities as a global player in climate, disaster and sustainable development policy dialogue through climate information and statements for policy making.

This action is in line with ACMAD’s mission to provide continental weather and climate watch information and act as the centre for excellence on the applications of meteorology for sustainable development in Africa.

This report covers IT and data management activities conducted in the framework of ClimSa at IT department of ACMAD.

Previous projects such as SAWIDRA, which implementation at ACMAD included, in addition to the four RARS stations the deployment of the High Performance Computing system – HPC composed of 13 servers with 344 cores 35TB local storage and 694 TB storage on SAN have significantly improved scope of IT and data management activities in support of ClimSa project.

ACMAD has provided also technical support to countries for the access to data via PUMA 2015 stations. Locally ACMAD has successfully updated the PUMA2015 Station and got access to new set of products that improved the forecasting.

The deployment of new data processing station: Climate station in collaboration with the joint research centre JRC, has successfully been implemented at ACMAD.

Important information and communication activity has been provided through the continuous upgrade and update of the Regional Climate Center RCC as well as the main ACMAD Web site. The Thredds server has been regularly maintained and updated with centre’s information and data.

The table below summarised the key achievement in terms of Information and communication Technology-ICT Technical support and DATA ACCESS for straightening research.

3. Results or Outputs

List of Results and Outputs

OUTPUT 3:

I) OPERATIONAL Status of RARS stations; Climates station, PUMA station.

1. Monitoring of RARS stations Network

6 RARS coordination meetings have been organized and reports generated and dispatched. Maintenance plan provided by SOLETOP. Sites visits as per schedule below:

Date	Sites	Tasks	Remarks (Working Day)
23. May, 2022 ~ 26. May, 2022	Republic of South Africa (SANSa)	<ul style="list-style-type: none"> Installation D-300 - Replace HRD-200 and LRD-200 to D-300* Receiving Test Progress regular maintenance work Operation Training regarding to antenna and receiver. 	4 Days
30. May, 2022 ~ 01. June, 2022	Kenya (ICPAC)	<ul style="list-style-type: none"> Retrieve HRD-200 and LRD-200 - It is operation from July.03.2021 Progress regular maintenance work Operation Training regarding to Antenna, Receiver, etc. 	3 Days
03. June, 2022 ~ 08. June, 2022	Niger (ACMAD)	<ul style="list-style-type: none"> Integrated D-300 - Replaced HRD-200 and LRD-200 to D-300* Receiving Test Progress regular maintenance work Meeting regarding 4 sites maintenance reports Operation Training regarding to antenna and receiver. 	4 Days
10. June, 2022 ~ 15. June, 2022	Gabon (AGEOS)	<ul style="list-style-type: none"> Support install CENTOS - SOLETOP will bring the CD disk for server in order to re-install CentOS. - Also, SOLETOP will bring the hard disk as a spare in case of the hard disk issue. Integrated D-300 - Replaced HRD-200 and LRD-200 to D-300* Receiving Test Progress regular maintenance work Operation Training regarding to antenna and receiver. 	4 Days

* The previously installed receivers (HRD-200 and LRD-200) will be retrieved by SOLETOP.

All sites have been visited by SOLETOP and full maintenance report provided and accessible on the following link:

http://154.66.220.45:8080/thredds/catalog/ACMAD/PROJECTS/SAWIDRA/RARS/SOLETOP_Maintenance_Hosting_sites_Tour/catalog.html

4. Monitoring of the PUMA station:

The PUMA station is operational at ACMAD. Some degraded signal reception have been observed during this quarter making impact on satellite images and some data. the investigation going on. This period we experienced breakdown associated with the cable of the antenna which has been changed. Station is back to normal operation since 1st My 2022.

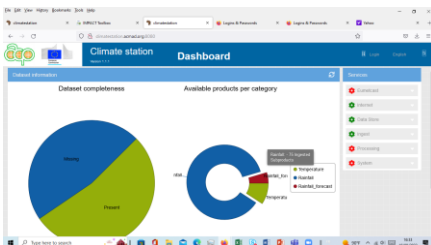

5. Monitoring of the Climate Station:

During this quarter we updated successfully the climate station with the support of JRC on 16 August 2022 to version 1.1.1.

Successful Update of the Climate station occurred on August 16th 2022 in collaboration with JRC through a zoom meeting with the participation of ICPAC. version of Climate station Changed from : V1.1.0

To version 1.1.1:

6. Data Processing –HPC

This period's activities include the monitoring of the warranty with InterTech, system administration and support to users for management of access and accounts. Due to power failure, we have gone through the HPC maintenance for mounting the luster storage system.

Bright software, the main Server administration and management tool, has expired on June 03rd 2022, many Read HAT licences will also expire soon.

The HPC has been delivered and installed in 2021 by INTERTECH. The site acceptance test occurred on 2nd December 2021. The Training occurred from 13th to 17th December 2021.

This activity is the last component of the SAWIDRA project which has been completed. The COVID-19 Pandemic situation has affected this programme.

The technical summary of ACMAD HPC is below:

Server: **13 servers,**
 CPU: **344 cores,**
 RAM: **3 TB;**

Local Storage
 SAS cards to SAN:
35 TB local storage
694 TB on SAN

The renewal process of the software licences installed on the HPC is on-going. Below is the cotation received from supplier for equipment for the renewal.

Article	Description de l'article	Quantité	Prix Unitaire Euro	Prix Total Euro
1	Bright Cluster Manager, public customer, 1 year support, subscription license	13	338,00 €	4 394,00 €
2	Red Hat Enterprise Linux Server, Premium (Physical Node with up to 1 Virtual Node) , 1 year	9	1 691,00 €	15 219,00 €
3	Red Hat Enterprise Linux Server for HPC Compute Node, Self-support (Physical or Virtual Node, L3-only) 1 year	4	123,00 €	492,00 €
4	Intel Parallel Studio XE Cluster Edition for Linux 1 year	1	1 867,00 €	1 867,00 €
5	Envoi par mail des licences ou online	1	Inclus	Inclus
Prix TOTAL Euro HT		21 972 €		

Upon guidance from Management, we contacted exact-lab, a technical partner who installed HPC infrastructure at ACMAD under AAP programme in 2014. We expressed the wish of ACMAD to Switch to open source software and tools on our HPC. The replied and confirmed that there is need to reinstall ACMAD's HPC with open source software and tool. There will soon share with us a quotation on the cost of such operation.

<i>Factors that prevented full achievement of the related tasks</i>
None

7. Synthesis on Deliverables

List deliverables (as stated in the work plan - indicate new deliverables) and detail progress towards completion.

African Center of Meteorological

4. Data Management and Processing –HPC

This period's activities include the monitoring of the warranty with InterTech, system administration and support to users for management of access and accounts. But in July 2022 ACMAD stopped HPC since licenses expired and it is not usable. This is the optimize power resources until solution is found for either reinstallation on freeware's or renewal of the expired licenses.

Climsoft version 4.1.12 has been installed at ACMAD by the consultant Mr Marcelin Habimana in june 2022. New features such as integration of data from paper archives have been integrated. The R-Instat feature as well has been integrated.

Full Expert's mission report available at link below :

8. Risks, issues and mitigation actions

Provide detail on any risks or issues you have encountered in the implementation period. Please include detail on the mitigating actions you are taking in response to this.

Identified risk or issue	Mitigation action
RARS station running cost may be challenge to some hosting sites	ACMAD recommended to SOLETOP to provide indicative running cost of all RARS station which will be considered by ACMAD and its partners for the sustainability strategy.
For the HPC on going action to go for freeware, warranty implementation conditions may be exposed.	ACMAD will inform INTERTECH SA all action regarding the changes on HPC for the freeware option.
CLIMSOFT database migration needs a high speed computer	ACMAD will run on the server the migration of the climsoft database from V3 to version3.1.12.

9. Lessons learned and recommendations

Please describe any key lessons learned during the period that you feel could be shared with others. Do you have any recommendations for future initiatives based on these lessons learned?

10. Additional items for discussion

Please add any further bullet points on key items to discuss.

None
