VIGILANCE MAP FOR HEAVY RAINFALL

08 Feb - 12 Feb 2022 issued on 2022-02-07

Implications:

- In next 5 days rainfall is expected to be more than 100mm;
- -Be aware of the existing risk of moderate to heavy rainfall;
- -There is a potential flash flood in the coming days

Hazards:

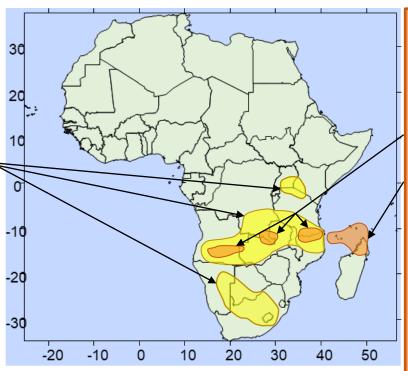

Moderate rainfall, flash flood, riverine flooding, landslides, soil erosion and Lightning likely

Potentials Impacts:

Displacements of people due to floods, outbreak of water borne diseases, damage of infrastructures (roads, bridges, ...)

Measures/Advisories:

Update and implement Flood contingency plans, Improve water management in reservoirs and dams, DRM authorities to monitor the situation and raise awareness, taking action is more likely, the situation needs to be monitored closely with NHMSs

Implications:

- In next 5 days rainfall is expected to be more than 150mm;
- -There is High risk of flash flood due to the high ground saturation and continued heavy rains.

Hazards:

Heavy rainfall, flash flood, riverine flooding, landslides, soil erosion and Lightning, strong winds,

Potentials Impacts:

Displacements of people due to floods, outbreak of water borne diseases, damage of infrastructures (roads, bridges, ...)

Measures/Advisories:

Update and implement Flood contingency plans, Improve water management in reservoirs and dams, DRM authorities be ready to take adequate actions, DRM to be in touch with NHMSs for more details and identification of vulnerable area,
